

WORKSHOP OUTLINE

INFRASTRUCTURE SUSTAINABILITY FOR MANAGERS

Aim

By the end of this workshop, participants should be able to implement best practice to achieve sustainability goals and objectives and lead a culture which actively supports teams to deliver an IS rating.

Workshop Benefits

This short interactive course is for managers looking to apply practical tools and best practice principles to successfully deliver an IS rating. Benefit from lessons learned through case studies and real project examples. You can leave with an action-ready implementation plan to lead your team in achieving IS success.

Content

What is Infrastructure Sustainability

- Defining infrastructure sustainability
- Value of sustainability over the asset lifecycle
- Benefits of early engagement with ISCA

The IS rating scheme

- Tool framework
- The rating process
- Trends and traction in ANZ

A tool kit for leading an IS rating

- Key challenges reported by project teams
- Principles for best practice sustainability leadership

Learning Objectives

- Define the benefits of setting sustainability goals and objectives at the outset of your project
- Identify the stages of an IS rating and describe the trends and traction of IS for similar asset classes in ANZ
- Apply best practice principles to capitalise on opportunities while anticipating common issues in delivering IS ratings

Duration

3 hours

Audience

Leaders and managers with accountability for setting and meeting sustainability objectives for projects or assets pursuing an IS Rating.

"Great conversation amongst our people around expectations and what the tool can deliver" – Transport Agency 2016

"Got a lot out of the session and gained better understanding of the industry trends and direction we will need to take." – Transport Agency 2016

Workshop costs

Members: 2,850 (excl. GST)

Non-members: 3,280 (excl. GST)

*For up to 15 attendees, excludes travel expenses which are charged at cost
